

HOW ARE WOMEN POLITICIANS OF FIJI TREATED ON FACEBOOK

We analyzed FB posts and comments to assess how women politicians are treated on FB. Our aim was to identify how they fare against their male counterparts and to evaluate whether women in politics face a greater challenge than men.

Much remains to be done to achieve equal participation of women and men in politics. The same applies to debunking gender-stereotyping and misrepresentation of women in media content, tackling the challenges faced by women in the media industry, and the risks facing women journalists. While there have been a number of reports looking at how women are treated on social media, it still struck us to find out how badly women of Fiji are treated on Facebook. As a pilot effort, we worked with [International IDEA](#), an intergovernmental organization with the mission to advance democracy worldwide, to analyze how women politicians are treated on social media in Fiji. Our main objective was to evaluate how women politicians are treated in social media posts and comments. We reported the preliminary findings already last year in this [article](#) as well as in the framework of the [accompanying webinar](#).

For a summary of the main findings, you can review this video from the webinar

We conducted the monitoring was conducted retroactively and focused on three time periods: (a) 15 September to 14 November 2018, the two-month period prior to election day in 2018; (b) 15 November to 13 January 2019, the two-month period after election day; and (c) 15 October to 13 December 2020, the two-month period closest to the conduct of the monitoring. Therefore, for six months, 17 public pages of the 12 most prominent women politicians, 28 public pages of 24 male sitting members of parliament, 2 public pages of social media influencers, 1 public page of a media entity, and 6 public groups were monitored and analyzed. The research was carried out using public data provided by Facebook—as the most popular social media platform—using the [CrowdTangle](#) tool, which provides access to public groups and pages. As CrowdTangle only tracks public content and does not monitor private personal profiles or private groups, we decided to focus on public pages (accounts) and groups.

Women are under-represented in Fijian politics but a record number (10 of the 51 available seats) was elected to parliament in 2018. At the same time, however, women's representation in leadership positions, up to and including party leaders, has significantly decreased. The monitoring focused on the public pages of women and men in politics, social media influencers, media outlets, and public groups on Facebook. The main objective was to evaluate how women politicians are treated in posts and comments. Posts and comments were classified as 'problematic content' when the authors used sexist, racist/ethnicity-based, threatening, politically victimizing, or individually abusive language.

In total, 2,603 posts and around 99,000 comments were analyzed for problematic content. Almost 11 percent of the posts were found to be problematic. Most of the problematic content (69.5 percent), however, was identified in comments from the general public, rather than the posts or comments by other politicians, the media, or influencers.

- Of all the problematic content (both posts and comments), the highest proportion (47.2 percent) took the form of political victimization, where abusive or threatening comments targeting political beliefs, ideology or affiliation were directed at the politicians.
- No problematic content was identified in the posts by the women politicians, whereas 35 problematic posts were found on the pages of their male counterparts. This means that none of the women politicians monitored were perpetrators of problematic posts. Female politicians were less inclined to raise controversial issues or openly criticize their political opponents in their Facebook posts. By contrast, men expressed their opinions more openly and were sometimes more critical of their political opponents.
- Overall, there were four times as much problematic content related to the Facebook pages of male politicians (133 cases) compared to their female counterparts (32 cases). Problematic content was found at an average rate of 1.33 cases per woman politician compared to an average of 5.54 problematic cases per male politician (see Figure 1). Therefore, interestingly, men were subjected to more online violence than women. However, it is important to note that the vast majority of the problematic comments aimed at women politicians were in the sexist category.
- Among the categories monitored, the Facebook pages of the male politicians produced the highest number—almost half—of all the identified problematic cases, where problematic content was identified in the post itself, in both post and comments, or only in the comments (133 posts out of 285 or 46.7 percent). The selected Facebook groups were next, with 98 problematic posts (34.4 percent). The Facebook pages of the women politicians produced 32 problematic cases (11.2 percent), see Figure 2.

CASES of Problematic Posts
[All 3 periods together]

MEMO98

Problematic content found:
[1] in the post itself
[2] in the post and related comments
[3] only within comments to the post

FEMALE Politicians

32 cases

PROBLEMATIC CONTENT WAS FOUND AT
AN AVERAGE RATE OF 1.33 CASE PER
FEMALE POLITICIAN

**285 cases
in total in
all 5
categories**

MALE Politicians

133 cases

PROBLEMATIC CONTENT WAS FOUND AT
AN AVERAGE RATE OF 5.54 PER MALE
POLITICIAN

Figure 1. Problematic Facebook posts, all three periods

• Political victimization was the most common problem in the posts (see Figures 3 and 4). In 41 (47.2 per cent) of the 87 posts a problem was identified with the post itself. It is notable that two-thirds of these cases were targeted at men (31 compared to 10). The next most frequent problem was sexism, which was noted in 15 of the 87 posts (17.2 per cent), while personal abuse and racism (all against women) were each identified in 9 cases.

Figure 2. Problematic Facebook comments, all three periods

- In the comments, personal abuse was the most typical problem. There were 216 such cases (45.8 percent) out of a total of 472 problematic comments (see Figures 5 and 6). Almost 90 percent of these cases were attacking men (190) while women politicians were attacked in 26 cases. The second most problematic category was racist/ethnically or nationality-based comments (135), which made up 28.6 percent of all the problematic comments. Once again, around 90 percent of these (123) were targeted at male politicians. There were also 69 sexist comments (14.6 percent).
- In a small number of cases during the monitoring, women politicians became the subject of smear campaigns, sexism or racism on Facebook. The most notable cases were those of Lenora Qereqeretabua, Riddhi Damodar, and Lynda Tabuya (see below).
- Compared to their male colleagues, female politicians are treated in a less serious manner on Facebook. Comments on their posts touch on their appearance and/or personal qualities rather than their politics. In addition to the smear campaigns against the three women politicians mentioned above, there were a large number of stereotypical or sexist comments about the women, including about their appearance.
